

## Tableau TACC1441 Hardware Accelerator

### Breakthrough Performance

Tableau's TACC1441 sets the new standard in password recovery performance. Working in conjunction with software from the established leader in password recovery, AccessData, Tableau's TACC1441 delivers unprecedented password attack rates.

The chart at the right graphs passwords-per-second when running AccessData's PRTK (Password Recovery Toolkit) on three different platforms: a common Pentium IV, a brand-new Intel Core2 Quadcore, and the same Quadcore with one TACC1441 accelerator.

WinRAR, PGP, and WinZip are widely used file formats which present enormous challenges for password recovery software running on traditional processing platforms. As the chart shows, the TACC1441 accelerates each of these algorithms by a factor of 6x - 30x compared to the un-accelerated processors. And that's just one TACC1441... Several TACC1441 units can be connected to a single host to boost performance even further!
