Tableau Data Doctor

Data Doctor Patient Satisfaction Survey

Once your Data Doctor program is up and running, you can create a simple Google Forms survey to start gathering feedback from employees who've made appointments with Data Doctors. It'll help you gauge their level of satisfaction with the program, capture their ideas for evolving it, and collect stories of their success. You can use this survey as an example.

Refer to the **Data Doctor patient satisfaction survey responses** sample spreadsheet and **Data Doctor patient satisfaction** workbook to jumpstart your analysis of the survey results.

Feel free to modify these templates to best suit your needs. For more information on implementing Data Doctor in your organization, refer to the full toolkit.

Preparing the data

If using Tableau Prep, see Clean and Shape Data and Pivot Your Data in Tableau Help for more information about data preparation and pivots.
