

6dTech uses Tableau to enable their customers to track order's stages to analyse their business through various stages of the order lifecycle

CHALLENGE

Order Tracking Was challenging and tedious due to need to track the same at multiple stages and stakeholders

SOLUTION

Daily ISP wise order transaction data is integrated and summarised using Tableau. Data is fetched from the BSS system and cleansed, transformed and populated to the DWH

They successfully:

- Reduce the time of efforts to analyse their business
- Consolidated data from BSS system, mySql is used for Application and DWH
- Downloading reports(csv,excel) and sharing over premises
- Setting alerts to receive their order status when a particular threshold exceeds
