Getting Started with  
Server and Online

Welcome to Getting Started with Tableau Server and Tableau Online. If you have access to Tableau Server or Tableau Online, you can log in and follow along, although your content will not match mine.

## Logging In

To access Tableau Online or Tableau Server from a browser, navigate to [online.tableau.com](https://online.tableau.com) or the URL specific to your server. You may be prompted to log in. How you do so will depend on how your organization configured this--it could be your email address, a username, or some sort of single sign on experience. Here, I'll enter my username and password.

You may be prompted to select a site when you log in. Sites are a way to partition users and projects so that they are completely separate from one another, such as across departments. If you are not prompted to choose a site, you'll be brought directly to the content you have access to. Content is organized across four tabs, across the top here.

## Projects

Projects are basically folders. Workbooks and data sources are published to a specific project as a way to keep them organized and control permissions to content. If we click into a project, its content is arranged in tabs within the project – the workbooks, views, and data sources we see now are those published to this project.

## Workbooks

Workbooks are the files published from Tableau Desktop. Workbooks include all of the content in the file. Here, we're looking at workbooks within the default project.

To see all the workbooks in this site, we can click on Home in the breadcrumbs, then on the workbooks tab. I personally really like this page, so I'll set it to be my default start page by going to the menu in the upper right and selecting "Make This my Start Page", then confirming.

## Views

The views are the individual dashboards, stories, and sheets contained in a workbook. We can find views either by clicking into a given workbook, to see what it contains. Or, like

with workbooks, we can see all the views in the site by clicking on Home then the view tab. This shows us all views, regardless of workbook or project.

## Searching Content

If we're looking for a specific view, we can look in a certain project or workbook, or at all views, where we can be a bit more targeted. The left-side pane searches or filters the content type we're currently looking at—here, all views. We can search for “sales” and see the relevant views that come up. Or we could filter for a specific owner, tags, modified date, etc. There's also the search at the top of the page. This searches across all content – including users, workbooks, views, and data sources.

## Data Sources

Speaking of data sources, there's a tab for data sources, too. We can see at a glance all of the published, curated data sources on this site and information about them, including analytics about how they've been used.

## Sites

If we have access to multiple sites, like I do, we can easily navigate between different sites here in the top toolbar.

## Account Settings Page

Now, let's look a little deeper into our user preferences by navigating to “My Account Settings”. Here we can do things like change our password (if this isn't controlled by your administrator), see the content we've published (if relevant), and manage subscriptions.

## Conclusion

Curious about “subscriptions?” Check out the video on Interacting with Content to learn more.
